

AGGREGATE SPREADER

Designed for the spreading of aggregates

Facilities as Follows;

- The Aggregate spreader can spread aggregate up to 14mm in size.
- Cabin controlled or from the rear of the body.
- The feed of the material to the spreader box is maintained by the automatic control system.
- 2400mm spreading width available.
- 4 off 600mm wide doors or more available.
- Two pneumatic cylinders operate all 4 or more doors.
- 2 Split hydraulic augers are installed to help spread the material to full width, if required.
- Augers are controlled by limit switches, which can work independently.
